VERIFAI.

id verification **done right**

information & benefits

our **dna**

Verifai: ID Verification done right. Our idea is simple: to offer the highest speed and accuracy in ID-scanning software through Artificial Intelligence and Deep Machine Learning.

Verifai was born in 2017 as a spinoff of Belsimpel, the largest independent smartphone retailer in the Netherlands. Belsimpel needed a fast and reliable ID scanning solution to identify customers applying for a mobile phone subscription. We could not find a solution on the market, so we decided to build it ourselves.

We built a simple, fast and accurate solution that we'd love to share with you. User-friendliness, safety and machine learning form the DNA of our product.

meet the team behind verifai

cutting edge technologies

———

Our idea is simple: to combine best practices and manual checks with **smart technologies**. Verifai uses **artificial intelligence**, deep machine learning, and **NFC chip authentication** to enable the highest speed and accuracy in ID scanning software.

machine learning

We love state-of-the-art technologies. That's why Verifai uses Artificial Intelligence and deep machine learning algorithms to verify ID documents. Verifai loads complex neural networks that are capable of detecting identification documents and MRZ with incredible accuracy and speed. The results literally get better every single day, as we run complex simulations on dedicated GPU servers to fine-tune the classifiers.

certificate check

Verify and authenticate ePassports and eIDs from all over the world by reading the NFC chip and checking them against root certificates.

security features

Verifai enables you to manually check security features by showing them automatically after verification. Spare time for searching in extensive databases, Verifai shows the right security features within seconds.

safety

Ensuring user safety has been a key motivator from the beginning. That's why we wanted to create a product that works offline and automatically blocks sensitive customer information.

GDPR-compliance

Another key part of Verifai's DNA is its compliance with the General Data Protection Regulation. During the development phase, we carefully considered each of GDPR's seven key principles. Want to know how? Check out our website!

machine learning

We are confident that machine learning is the start of a new era in ID verification. We feel it's about time, too: today's mobile hardware is powerful enough to run AI and Machine learning enabled software. Also, we get a kick out of a product that gets smarter the more it's used.

easy to use

ID verification shouldn't be complicated. Since the whole idea of our product is to make life easier, the software and SDK's itself should work just as easily. Implementing a simple solution shouldn't take several days. That is why Verifai's SDK's has been designed to be seamlessly integrated within a blink of an eye.

driven by **innovation**

our quest for specimen documents

—————

our mission

Our mission is to prevent identity fraud around the world. By improving our ID verification software and our reference database, we're getting closer and closer to a fraud-free world. By "teaching" our software on the existence of specific ID models, we can drastically improve the detection of fake identification documents.

how we do this

Verifai uses Deep Machine Learning and neural networks to make our ID verification software extra smart. We teach our software by training documents under practically all conditions, such as different angles, light conditions and backgrounds.

why we need physical specimen IDs

When using artificially created or digital images of specimen documents, we are not able to create lighting conditions, backgrounds and angles in a natural way. That's why we need physical specimen documents instead of digital scans or photos. We use them to 'train' our software which improves the accuracy of our product.

prevent identity fraud by sharing specimen documents

It is essential that specimen documents are shared with organizations that help prevent identity fraud. These entail government institutions, but also commercial organizations such as Verifai. You can support us in our battle against identity fraud.

the complete sdk to verify identity

Verifai is **extraordinarily smart OCR software**, which can authenticate identification documents in a matter of seconds. Verifai's powerful iOS, Android, Windows, and server-side SDK solutions help **improve your ID verification procedure** significantly.

Verifai is a **Software Development Kit** which can be integrated with and connected to almost all existing software and hardware solutions.

Each type of usage offers different advantages. With mobile devices, we are able to offer integration of **NFC-scanning**. This is available for both Android and iOS devices. Our smart passport scanners offer the possibility to **authenticate** the documents as well.

mobile **devices**   Laptop, computer and **server-side**   document **scanner**

	Read MRZ	Live blocking templates	Automatic recognition of any id	Use NFC to read RFID	Check against root certificates with NFC	Use IR and UV filters	Security features check
iOS	✅	✅	✅	✅	✅	❌	✅
Android	✅	✅	✅	✅	✅	❌	✅
Server-side	✅	✅	✅	❌	❌	❌	❌
Dedicated device	✅	✅	✅	✅	✅	✅	✅

fast and simple use

With an extremely UX-friendly interface and fast scan speeds, scanning will take your customer no effort or time.

complete and seamless SDK

Verifai is designed to be the most powerful ID verification software tool available. That's why our SDK can be integrated perfectly in iOS, Android and Windows applications.

cost-effectiveness

The effectiveness of AI saves our developers a lot of time. This way, you pay the absolute minimum for the absolute maximum. Welcome to market-disrupting pricing.

continuous updates

Our software is updated regularly, at no additional cost. With Verifai, you always have the most advanced software at your disposal, without question.

what verifai **offers you**

benefits

Verifai's ID verification software is perfect to anyone who seeks to integrate an ID verification tool in their software, as we support UV/Infrared passport scanners, Android and iOS, and offer a web-based solution.

Embed **Artificial Intelligence and Deep Learning** in border control processes, law enforcement and verification of citizen's IDs.

Verify and authenticate ePassports and eIDs from all over the world by reading the **NFC chip** and checking them **against root certificates.**
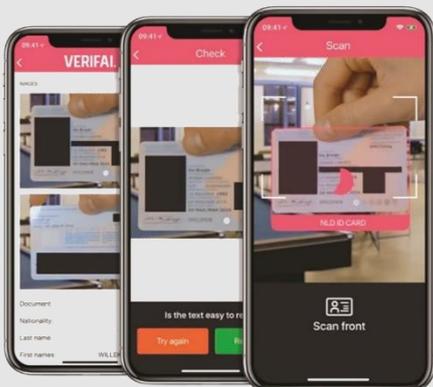

Verifai is fully **GDPR-compliant** and works offline.

With pricing **71.7% cheaper than alternatives**, Verifai is the most affordable solution on the market.

Verifai is a **Software Development Kit** which can be integrated with and connected to almost all existing software and hardware solutions.

id verification
done right

pay per scan

Everyone loves transparency, right? At Verifai, transparency is part of our identity. We don't do setup fees, hidden costs, or nasty surprises. We simply offer clear pricing. ID verification has never been so affordable. You can only pay per scan afterwards with our monthly plan.

With a monthly Verifai plan you won't ever come up short. You can verify IDs year-round, and simply pay afterwards. No fuss nor hidden fees. Simple ID verifications, whenever you need them. Good to know, payment is afterwards on a monthly basis.

Volume range	Price per scan		Volume range	Price per scan	
<499	€	0,245	9500 – 9999	€	0,063
